Ladder Safety

September kicks off fall maintenance and practicing correct ladder safety prevents serious accidents.

Always look up before handling or climbing a ladder to check for electrical wires to prevent fatal shocks.

Follow the 4-1 rule. For every 4 feet you are going to climb, you should move the base of the ladder 1 foot away from the wall or supporting structure.

Always keep three-point of contact on the ladder. Three of your four limbs must touch the ladder at all time while you climb up or down.
